Press Release - Rouen, August 2022.

Fiber Optics and Materials, Moss Series sheds light on new product launches.

How Moss Series enhances light ?

ROUEN, August 2022 - Moss Series, a lighting and design start-up, presents its fiber optic and glass lighting fixtures at the 2022 Maison et Objet show in Paris. These fixtures transport us into a poetic and utopian universe, where the magic of light is sublimated.

The Moss Series brand unveils two new products: "The G-Family", a range of lamps and floor lamps with the soft shapes of hand-blown Italian glass pebbles. Moss Series is also introducing a collection of fiber optic chandeliers, which have made the brand a household name in the lighting industry. Moss Series has made its reputation by using innovative and surprising technologies, but also by combining various materials such as glass, crystal, carbon or Limoges porcelain for over 15 years.

Moss Series' fiber optic creations emanate a subtle aesthetic that blends into any interior space. Adding innovative technology to fairy tale appeal results in unique, original and modern chandeliers. Moss Series offers four types of fiber optic chandeliers: pebble chandeliers, bubble chandeliers, tube chandeliers and crystal chandeliers. These different combinations offer the possibility to choose which form of chandelier best suits which type of interior space, while creating a certain harmony. The combination of fiber optics and different materials such as crystal, glass or aluminum, contributes to a sleek, sculptural and warm visual effect.

Moss Series also reveals for this new edition of Maison & Objet, its new range of lighting "The G-Family". This range includes table lamps and floor lamps set with a mouth-blown Italian glass pebble. Also composed of a variable lighting, itself associated with a grooved aluminum tube from which comes a discreet and functional light. Offering three table lamps in chrome, matte gold and matte black and two floor lamps in matte black and matte gold, Moss Series offers a variety of lighting fixtures that can be easily integrated into interior spaces: office, dining room, living room, bedroom. The combination of glass and aluminum create a minimalist and airy fixture, bringing a contemporary touch to interiors.

About Moss series™.

A lighting and design publishing startup, created under the guidance of Isa Moss founded in 2005, Moss series™ is committed to fostering a lateral and open relationship between creative direction and local craft. The brand has gained recognition for its integration of fiber optics into its lighting fixtures and its expertise in glass shaping and blowing. Moss series™ is also the desire to share the beauty, the lightness, the magic of light, it is above all the requirement of the finish, thanks to an infrastructure calibrated to provide total control over the technique and quality of our luminaires. Today, Moss series™ signs 4 collections of chandeliers, pendant lights, lamps and floor lamps.

We would be delighted to offer you a product from the G family for your shootings. We are at your disposal to make this experience even more magical by your side.

The G-Family
